

ABSTRACT OF THE DISCLOSURE

In an electric appliance renting system, a use contractor leases an e-information terminal together with an e-air conditioner, an e-refrigerator and an e-television from a service providing company. The work information of these electric appliances is sent from the e-information terminal to a rent managing server, which the service providing company possesses, through the Internet. The rent managing server sends the data relating to the rent inclusive of the electric power rate of the rented electric appliances to the e-information terminal.
